

### **DPC 3 note about host problems.**

It has come to my knowledge that some hosts/sequencers don't handle GUI-elements properly.

This can result in glitches/juddering on playback when the plugin window is hidden.

The glitches occur only on playback, not when rendering a track.

In case you want to use the drum sampler in a live situation ( and experience glitches ) I suggest you download the DPC 3 XP version. It has no animated GUI-elements ( drum pads ) but everything else is the same .

I am very sorry about this. The problem is not within the plugin, but within the host. However, Jeff McClintok of Synthedit has announced a workaround-fix for this with the next SE update.

Regards

Mik,GTG Synths.
